

On Running the Sci-tech Learning Space

One January day in 2018, the respected Comrade **Kim Jong Un** visited the Pyongyang Trolley Bus Factory.

While learning about the factory's renovation project and production, he dropped in at the sci-tech learning space.

He learned in detail about its operation, and stressed the need to operate it effectively. Looking at the computers lying neatly on the desks, he said the main thing is to operate the space on a planned and regular basis so that it could bear fruits in practice.

Listening to him, the officials learned that if they rested content with laying out the sci-tech learning space, they would never attain due success in running it.

Looking at them, **Kim Jong Un** reiterated the need to operate the space effectively so that the facility could play its role as a base where the employees acquire necessary professional knowledge.
