

Work More Important than Modernization

One day, the respected Comrade **Kim Jong Un** visited a machine-building factory.

He was very satisfied with the eye-opening sci-tech achievements highly competitive in the world its workers have made in the course of developing cutting-edge machinery.

In the current era when science and technology develop rapidly, competition for national strength can be said to be a competition in science and technology.

That was why **Kim Jong Un** felt happy whenever he saw sci-tech successes during his inspection of any sectors and units.

Setting forth tasks facing the factory, he stressed:

It is more important to train its talented personnel than the work to modernize its facilities. The factory should pay close attention to the work of building up the ranks of designers, technicians and skilled workers and ensuring the research and living conditions of scientists and technicians.

The instruction implied his noble intention that greater successes would be achieved when priority is given to the training of scientific and technical personnel.
