

Become Masters of Inventions

One February day in 2017, the respected Comrade **Kim Jong Un** saw an equipment manufactured by scientists and technicians of the State Academy of Sciences.

It was a proud creation made with their own efforts and technologies in a short period of one month. The equipment, made in a Korean style by adding various functions, worked as good as those made in other countries.

After learning in detail about its performance for hours, he expressed great satisfaction and spoke highly of the scientists for having made it in a short period.

Looking at the scientists filled with great excitement, he said that they should become masters of inventions and produce many valuable research findings conducive to realizing the Workers' Party of Korea's plan to build an economic power.
