

To Create an Example and Standard Representing Poultry Industry

One July day in 2020, the respected Comrade **Kim Jong Un** visited the Kwangchon Chicken Farm under construction.

Looking round the construction site for hours, he said in the following vein: It is my intention to build the Kwangchon Chicken Farm as a farm with a high automatic and scientific level and a highly intensive level in the production of eggs and meat so as to make it a model and standard in the country's poultry industry. It is important to put all production lines on a high level of automation, ensure the quality of the construction project, establish a strict hygienic and anti-epizootic system, and take proper measures to ensure the issues of supplying feed, electricity and water, and transportation. It is also necessary to set up the lines of making paper egg boxes and packing eggs, and add quality inspection facilities to the egg-packing line.

In March and June 2021, he gave important instructions on building the farm as intended by the Party. And in July and October that year, he specified the tasks as regards the facilities necessary for the farm, preparations for its management and afforestation plan.

As a result, the farm has perfectly put the production of meat and eggs on an intensive and scientific basis so that it can be a model and standard representing the country's poultry industry. It has full sets of modern equipment which automatically controls all processes ranging from temperature and humidity to lighting, feed supply and excrement disposal in the breeding houses.

He expressed great satisfaction over the fact that new concept, mode and high level, which could not be compared to before, have been developed in the production and management of the farm. The farm, which has put production on an automatic and scientific basis at the highest level, is a proud model of the times desired and demanded by the Party from A to Z, he said, adding that it serves as a good standard clearly indicating the goal to be attained by all units aspiring after modernization.

And he set forth higher goals for the farm; to continuously heighten the standard of modernization and scientific management as an example for leading the poultry industry of the country and a base of extending advanced science and technology, to ensure the quality of the products at low cost by optimizing and standardizing the management of technology, facilities, chicken raising and feed, to generalize the experience and modernization of the farm and extend its successes on a nationwide scale to bring about a real change in the improving the people's living standard.
