

Innovative Creation

In August 2024, the respected Comrade **Kim Jong Un** gave field guidance at the regional-industry factories under construction in Hamju County.

Looking round the construction site, he paid close attention to the issue of sustaining the individual features of new structures.

He said: Just as people look different from one other, so buildings should vary according to appearance.

Industrial buildings should be designed different to suit their characteristic features that are appropriate for their functions. Plane arrangement should be done well to build industrial facilities as suited to their functions, and elevation arrangement is a key to ensuring their aesthetic beauty.

An important factor in designing industrial buildings is to arrange necessary elements effectively as appropriate to their functions.

The instruction represented the manifestation of his warm love to provide the people with the best and new things that the world has never witnessed, and a precious guideline that broadened the horizons of designers with his incomparably unexcelled wisdom.
